

## ENGINE OIL

Change your oil regularly. One of the ways you can keep your vehicle in top operating condition is to change the engine oil as outlined in your Nissan Recommended Maintenance Schedule. Oil lubricates the moving parts of your engine, preventing harmful metal to metal contact, minimizing friction, and carrying away excess heat. By doing these things, oil enables your engine to operate more efficiently, providing you with increased performance and fuel savings.

## IN-CABIN MICROFILTER

Most Nissan vehicles are equipped with an in-cabin microfilter that filters out dust, pollen, sand, bacteria, cigarette smoke and other minute airborne particles. A dirty in-cabin microfilter may restrict air-flow volume and cause a drop in the overall performance of your heating and cooling system. Replace your in-cabin microfilter every 18 months or 24,000 km.

## SHOCKS & STRUTS

Shocks and struts influence the control and handling characteristics of your vehicle by holding the tires to the road. They control the action of the spring to resist bottoming out – like when you hit a pothole – and keep the movement of the springs under control when they rebound. Worn shocks or struts prevent required contact when coming out of a dip, or compression in the road. Without shocks and struts, a vehicle would continually bounce and bound down the road making driving hazardous.

## OIL FILTERS

Technology in design and manufacturing are the primary differences between oil filters. Genuine Nissan filters incorporate the following features into each filter we sell: The anti-drainback feature minimizes oil drainage from the filter when the engine is turned off; when the engine is turned on later, oil is immediately supplied to all engine components. The high-quality paper is finer and resists clogging and tearing. Combined with up to 33% more area of the filter paper, the Genuine Nissan oil filter is the best choice for removing impurities and ensuring lasting engine life.

## BRAKING SYSTEM

Be familiar with the braking system your car uses (eg., drum, disc, ABS, etc.). Ask your Nissan Dealership if you're not sure. If you have Anti-Lock Brakes (ABS), there is no need to "pump" them to avoid skidding. Simply apply the brakes firmly.

## TIRE ROTATION

Regular tire rotation prolongs tire life.

Tires are inspected for wear, improper alignment, inflation pressure, and steering/suspension concerns.

## Additional Dealer Services Available:

- Free shuttle service to and from your home or office.
- Late night drop-off for your convenience.
- Free battery load test to assure trouble-free starting during the summer months.
- Free washer fluid fill-up with each service.
- Highly skilled Factory-trained Technicians fix your vehicle right the first time.
- You may require additional Off Road Maintenance for your 4WD vehicle.
- All services are subject to environmental levies and applicable taxes.
- Comfortable waiting area.
- Personalized One to One Service.
- Daily newspaper available.
- Work area with Wi-Fi access.

## Know the Difference

Genuine Nissan Parts | Factory-Trained Technicians | Advanced Diagnostics

## Tire Basics 101

Tires provide the only four points of contact between your vehicle and the road, and they contribute immensely to driver and passenger safety. Tires affect acceleration, traction, steering stability, comfort, noise, braking, cornering, load-carrying capacity, fuel economy, and overall handling and performance.

## Nissan Tire Advantage

All tires purchased through the Nissan Tire Advantage are recommended for use on your Nissan vehicle to maintain correct factory specifications and performance.

## What is the best engine oil for my Nissan?

For superior performance, use synthetic oils – man-made lubricants – formulated to have planned and predictable properties.

They provide:

- Superior high and low temperature performance
- A lower oil consumption rate
- Better overall engine protection

Nissan relies on premium Mobil Super 1000 engine oils for your scheduled oil change. Ask your Service Advisor what is best for your Nissan.

## Fuel Savings Tips

- Make sure your vehicle's tires are properly inflated to manufacturer's recommendations. Each 2 psi drop in pressure increases your fuel costs by about 1%.
- Maintain your vehicle properly. Poorly maintained vehicles can significantly increase fuel consumption and produce more emissions.
- At highway speed, drive with your windows closed. Even with air conditioning, fuel savings are significant.
- Use your cruise control when conditions permit.
- Have your vehicle's spark plugs inspected and/or replaced at the recommended service intervals.

## Only your Nissan Dealer offers you...

- Nissan factory-trained Technicians and Service Advisors that deal primarily with Nissan vehicles and know your vehicle's specific maintenance service requirements
- Genuine Parts that meet Nissan's demanding standards
- Nissan-specialized diagnostic and repair tools
- The most up-to-date Nissan products, parts and service information
- Immediate access to warranty service history and factory technical information
- 12 month/20,000 kilometres parts and labour limited warranty when Genuine Parts are installed by your dealer
- Lifetime limited warranty on select replacement parts
- Clear, up-front estimates
- Over 185 locations nationwide
- Nissan Express Service (at select dealers)
- Shuttle service/Courtesy van (at select dealers)

## Genuine Nissan Parts and Service are the best choices for your Nissan vehicle

- Specifically built to suit your particular Nissan model, chassis and power train
- Manufactured to stringent Nissan engineering and quality standards
- Designed to ensure that your Nissan vehicle continues to function at optimum levels
- Better fitting, longer lasting and help to ensure a greater resale value
